

ROEMEX
Speciality Oilfield Chemicals

Roemex is an independent, privately owned speciality chemical and service provider, supplying full chemical management and consultancy to oil and gas operators around the world.

Experts in the manufacture and supply of speciality oilfield chemicals, Roemex has a 30 year track record in creating bespoke chemical solutions. This maximises the production of oil and gas throughout the entire lifecycle of an oilfield.

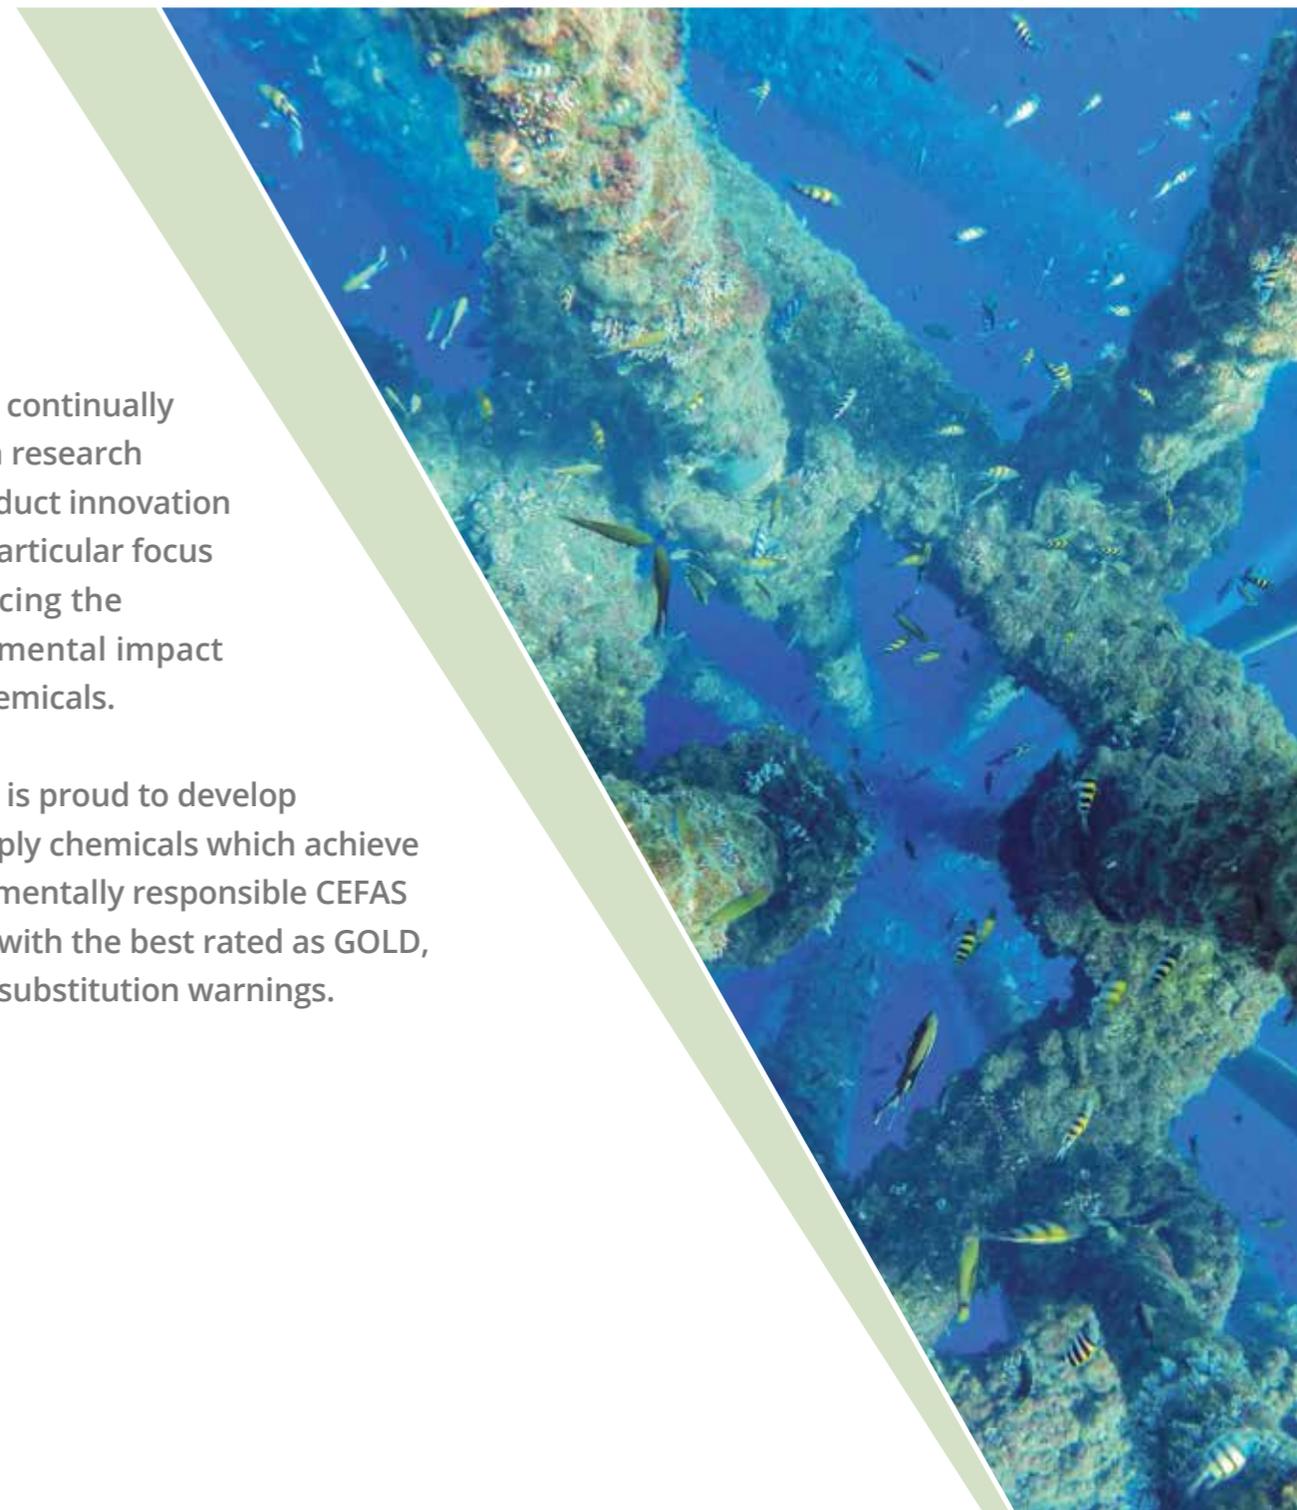

Our products and services are designed for applications from drilling and completions, hydro-testing infrastructure, production chemicals and renewable energy.

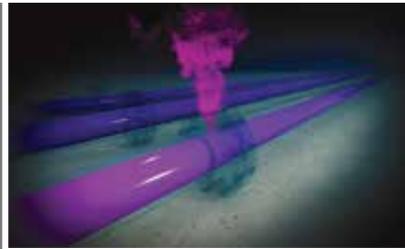

Roemex chemicals have helped operators around the world to realise increased volume, consistency and quality of oil and gas production whilst driving cost savings and efficiencies.

Our team of technical specialists and chemists possess a wealth of knowledge and experience in the oil and gas industry. This experience enables Roemex to produce bespoke chemical solutions for diverse and challenging wellbore and reservoir conditions, whilst being compliant with local environmental legislation.

Roemex continually invest in research and product innovation with a particular focus on reducing the environmental impact of its chemicals.

Roemex is proud to develop and supply chemicals which achieve environmentally responsible CEFAS ratings, with the best rated as GOLD, with no substitution warnings.

Drilling and Completions

Roemex has supported clients all over the world to optimise drilling performance through the use of world leading completion chemicals, designed and manufactured by a team of expert chemists and technicians.

We understand that no two wellbores are the same and tailor our solutions for each well where geological formation, environment and angle can all affect the chemical performance. Utilising our dedicated research, development and testing laboratory we analyse the situation identifying the right chemical combination to optimise oil and gas production.

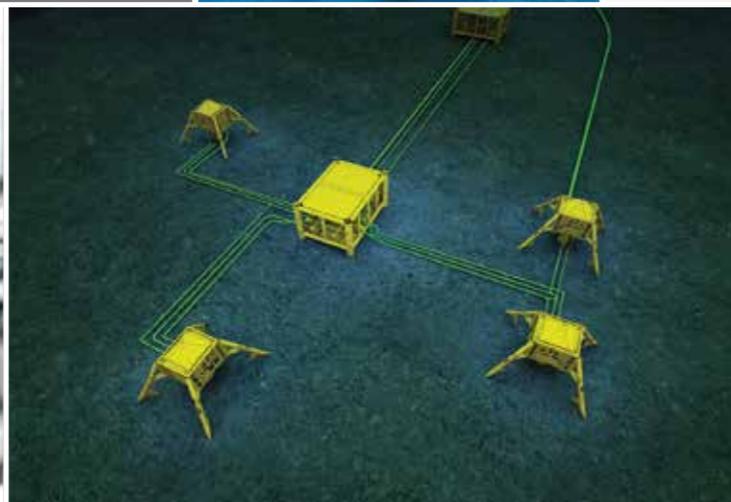

This enables a reduction in cost and time in constructing the well, with a positive impact on long-term well productivity.

Roemex wellbore cleaners, lubricants and breakers are all designed to minimise any environmental impact, complying with international environmental standards and regulations.

Products and services:

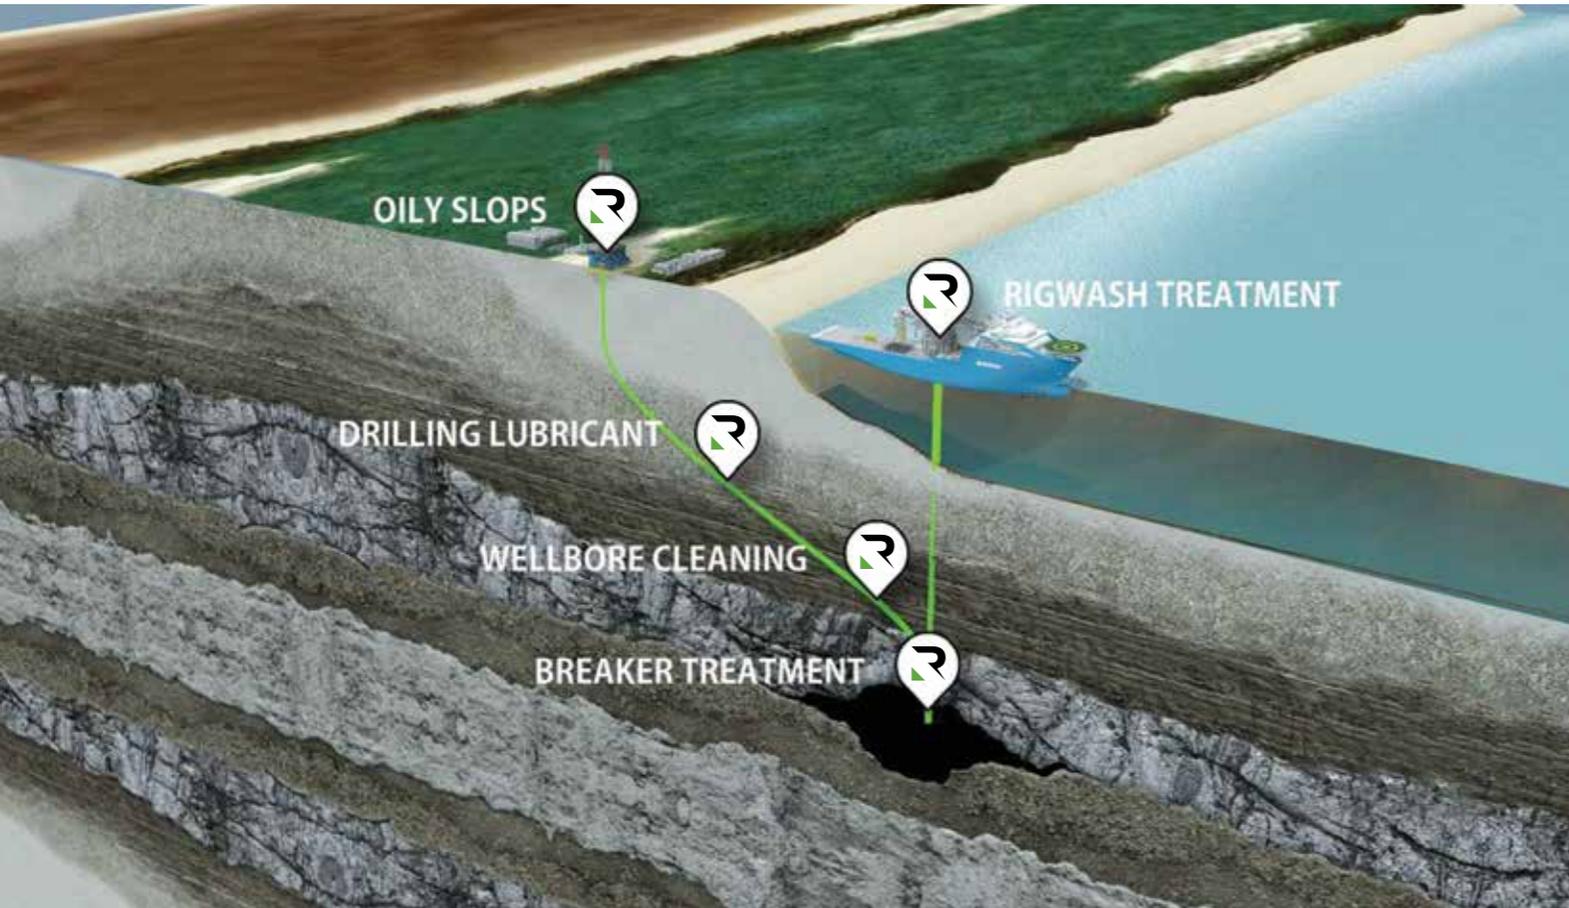

Roemex supplies innovative, speciality chemicals for;

- Drilling and completions
- Production
- Hydrotest
- Renewable energy

Drilling and Completions

There are a number of stages throughout the drilling and completions phase where Roemex speciality chemicals are used to improve drilling efficiency and performance.

R LUBRICANTS (HyperGlide and Brine Lubricant RX-72TL)

Treatment with Roemex lubricants, significantly reduces the down-hole torque and drag forces exerted on subsurface strings.

Our lubricants and friction reducers are applied to treat water, brine and water based drilling fluids (WBM).

R WELLBORE CLEANERS (RX-03X Well Cleaner and RX-8075 Pipe Dope Dissolver)

Roemex wellbore cleaners are designed to clean all drilling fluid systems at high and low temperatures. At the end of the drilling process, Roemex cleaners remove drilling fluid and other residues that would remain in the wellbore. Efficient well clean-ups reduce cost, improve productivity and greatly contributes to the success of future well operations.

Pipe dope dissolver products are designed to remove pipe dope from the drill pipe. These grease type compounds can cause significant impairment of productivity and are used either as part of wellbore clean-out train or as a pipe pickle treatment.

R FILTER BREAKER TREATMENTS (UniFlow Filter Cake Remediation System)

Whilst drilling the reservoir section, filter cake is created. Filter cake can restrict the flow of fluids through sand control screens and other types of completion hardware. Roemex filter cake remediation treatments uniformly attack, breakdown, and remove filter cake, to maximise production potential.

R OILY SLOPS TREATMENT CHEMICALS

The addition of Roemex chemicals in the separator tank will enable simple and efficient separation of oil, water and sand.

R RIG WASH CHEMICALS

Roemex chemicals can be used for washing and cleaning dirt and debris from topside deck areas.

As an independent and flexible company our drilling and completions chemicals are designed, analysed and tested to meet specific customer requirements and applications.

For advice on product selection please contact enquiries@roemex.com

Production Chemicals

Roemex production chemicals are used to enhance oil and gas production, and mitigate associated challenges.

Our production chemicals are designed to maximise flow and maintain the integrity of the production plant, allowing increased productivity and cost reduction benefits.

Production chemicals are used for the following applications:

R FLOW ASSURANCE

mitigating and preventing scale and wax formation

- ▶ WAX INHIBITOR/DISSOLVER
- ▶ SCALE INHIBITOR/DISSOLVER
- ▶ ASPHALTENE DISPERSANTS

R INTEGRITY

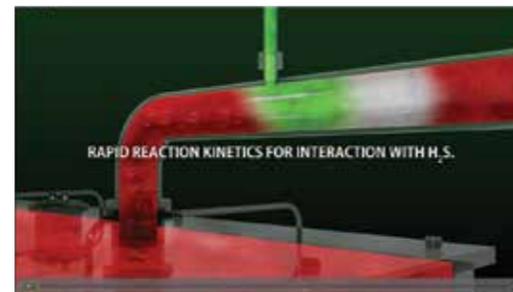

protecting production plant from corrosive environment

- ▶ CORROSION INHIBITORS
- ▶ H₂S SCAVENGER
- ▶ OXYGEN SCAVENGER
- ▶ BIOCIDES

R SEPARATION

improving water clarity to meet requirements for oil in water overboard discharge

- ▶ DEMULSIFIERS
- ▶ DEOILERS
- ▶ DEFOAMER/ANTIFOAM

Hydrotest Chemicals

Roemex provide a full range of environmentally responsible chemical products for hydrotesting operations.

To clearly identify fault areas:

- ▶ LEAK DETECTION DYES

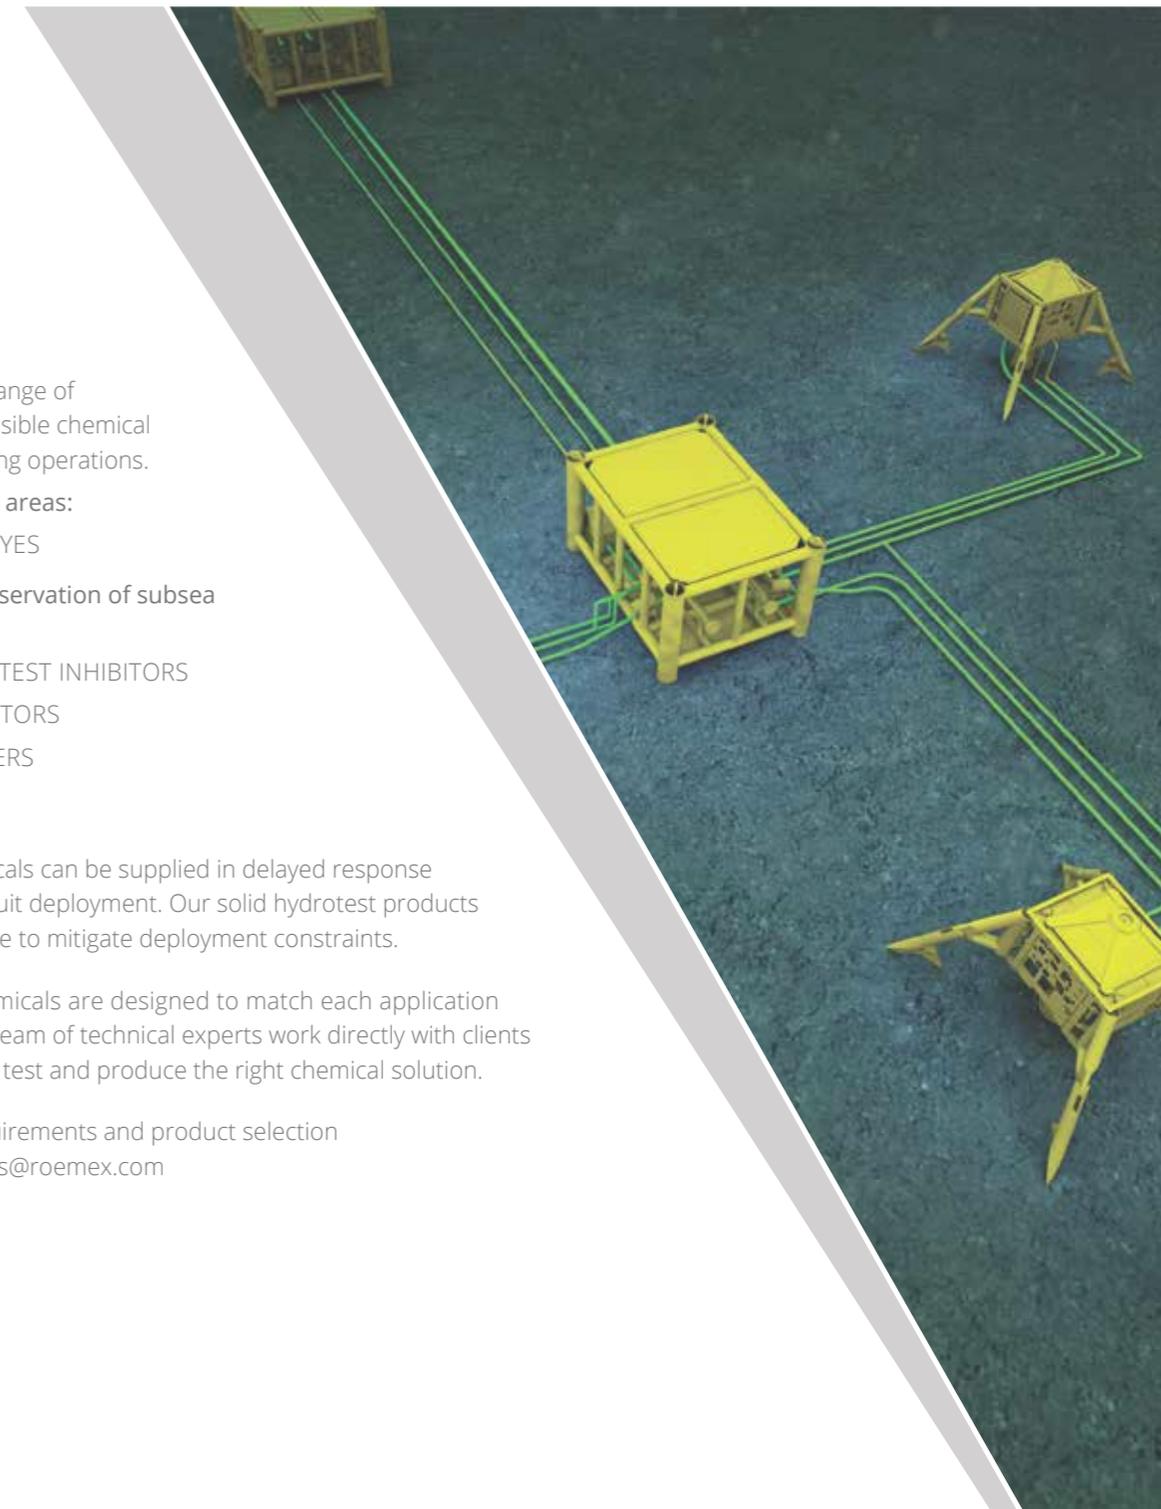

For protection and preservation of subsea and metal structures:

- ▶ COMBINED HYDROTEST INHIBITORS
- ▶ CORROSION INHIBITORS
- ▶ OXYGEN SCAVENGERS
- ▶ BIOCIDES

A range of these chemicals can be supplied in delayed response solid or liquid form to suit deployment. Our solid hydrotest products are designed to disperse to mitigate deployment constraints.

Roemex hydrotest chemicals are designed to match each application and environment. Our team of technical experts work directly with clients to understand, analyse, test and produce the right chemical solution.

For advice on your requirements and product selection please contact enquiries@roemex.com

Capabilities

- ▶ Roemex's global Research & Development centre in Aberdeen provides Roemex the ability to undertake research, testing and development work to manufacture bespoke chemical solutions that suit individual field requirements.
- ▶ Our team of experts have extensive knowledge and experience of oilfields around the world. They design the best chemical products and solutions to improve the performance of oil and gas production.
- ▶ As an agile and dynamic organisation, focused on speciality chemicals, Roemex can offer a flexible, cost effective service, tailored and responsive to client needs.
- ▶ Roemex has an established track record of improving the production of oil and gas, realising cost savings for operators around the world since 1984.
- ▶ Environmentally focused Roemex is ISO 9001 (Quality) and ISO 14001 (Environmental) accredited and strives to attain GOLD level environmental CEFAS product ratings.

Global reach

Roemex is a global business with over 30 years' experience of working around the world. Headquartered in Aberdeen, Scotland. Roemex employs over 40 people and deliver projects on an international scale across EMEA, Asia Pacific and the Americas.
